

## Bird Wire & Post

*The stealthy solution for keeping birds from landing or roosting*

Bird Wire is a discreet, humane, and highly effective bird control solution for ledges, rooftops, and other long surfaces. Its stainless steel wires are mounted on posts at varying heights, creating an uneven surface that prevents birds from landing, perching, or roosting. Designed to deter larger birds such as pigeons, gulls, and crows, Bird Wire offers reliable protection while blending seamlessly into its surroundings. It is used extensively on heritage sites and modern building designs alike, providing versatile protection without compromising aesthetics.

### Key Benefits

- **Discreet & low-profile:** Preserves the appearance of high-visibility areas.
- **Humane & safe:** Keeps birds away without harm.
- **Adaptable coverage:** Ideal for flat, curved, or sloped surfaces

### Applications

- **High-profile historic buildings:** Maintain aesthetics while protecting delicate structures.
- **Rooftop edges & ridge tiles:** Secure your roofline from unwanted visitors.
- **Parapets & balustrades:** Stop birds from roosting on exposed edges.
- **Beams & pipes:** Protect hard-to-reach spots with ease.

### Specifications

- **Wire Size:** 1x7 nylon-coated, 0.7mm diameter
- **Wire Length Options:** 250', 500', and 1000'
- **Post Height Options:** 3.5", 4.5", 5", and 6"
- **Available Hardware:** Glue-on bases, railing clamps, springs, crimps, and rivets.
